Why Use WSJT-X (FT8) Mode for HAM Operations

- Exceptional Weak-Signal Performance
 - FT8 can decode signals at extremely low signal-to-noise ratios—often below –20 dB—enabling communication under conditions where traditional modes like SSB or CW cannot succeed.
- Fast, Automated, and Efficient QSOs
 - The 15-second synchronized transmission cycles and structured exchanges make FT8 contacts consistent, quick, and partially automated, allowing operators to run stations with minimal interaction
- High Stability and Reliability
 - FT8's precise timing and error-correcting encoding allow it to perform well even during fading, interference, or crowded band conditions, providing dependable communication.

Ideal for Low-Power (QRP) Operation

- Ideal for Low-Power (QRP) Operation
 - Thanks to its efficient digital encoding, operators can achieve long-distance (DX) contacts using very low power levels, often just a few watts.
- Excellent Tool for Antenna and Propagation Testing
 - Because FT8 signals are automatically spotted on networks like PSK Reporter, operators can easily evaluate antenna performance and observe real-time propagation paths.
- High Global Activity and DX Availability
 - FT8 is one of the busiest modes on modern HF bands, providing constant activity and making worldwide contacts possible at nearly any hour of the day.
 - Easy DX hunting – Especially assisted by DXSummit.fi website

What Is GridTracker and Why Hams use it with FT8

Overview and Benefits for Amateur Radio Operators

What Is GridTracker?

- A FREE companion application for WSJT-X and other digital modes software
- Tracks FT8, FT4, and other digital QSOs in real time
- Displays stations on a world map by Maidenhead grid squares
- Integrates with logging programs and spotting networks
- It gives FT8 contacts “ Personality” and makes the hunt fun!

Why Operators Use GridTracker for FT8

- Provides a visual, live map of all decoded stations
- Once you click on a contact, you it looks that contact up in QRZ
 - See photo of the person, all details, Shack and Antenna's, all details of that person they wish to share.
 - Links to more detail like websites (Antarctica live cams, Stations Details) (ships – Exact location and Grid square, Details on the ship... e.g. my Russian Science Vessel
 - Previous contact information with them
 - What Bands you worked, Confirmations
- Helps identify where your signal is being heard
- Simplifies chasing DX and confirming new grid squares
- **Works seamlessly with WSJT-X without extra setup**

Key Benefits of GridTracker

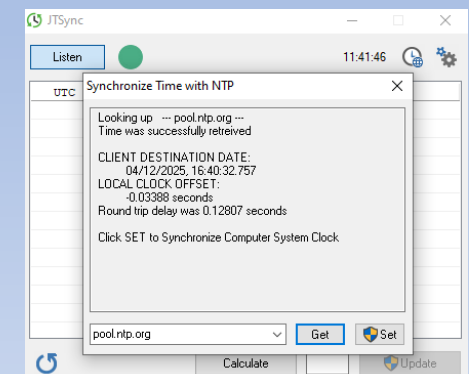

- More fun- Instant signal path visualization on global or regional maps
- Automatic logging to popular logbooks (Logbook of the World, QRZ, eQSL, ClubLog, etc.)
- Real-time propagation awareness for better band decision-making
- Shows worked vs. confirmed grids, DXCC, CQ/ITU zones, and more
 - Perfect for Working all States, Continents, Grid squares, and other Awards
- Enhanced situational awareness during FT8 operations = Adds the FUN

Recommended Software and Locations

- WSJT-X - <https://sourceforge.net/projects/wsjt/files/>
- GridTracker - <https://gridtracker.org/>
- DX Spotting Website: <http://dxsummit.fi>
- QRZ membership for live lookups of your contacts (this makes it FUN) only cost \$39
- Good Clocking app

Definitely recommend a Time Sync app that runs in the background of the PC and frequently updates your computer time to the precise time.

- NetTime, Atomic Clock Sync, SNTP Network Time Sync, and PTPSync (Precision Time Protocol Sync)
- I Use – NetTime <https://timesynctool.com/> sometimes JTSYNC
 - I use JT-SYNC when the station I want has a clock that is way off.
 - I will change my clock to match theirs and get that contact
 - Then use JTSync to reset the clock or wait for my background app to adjust it to normal.
 - It can also work in the field when you have no network connection – It can listen to the FT8 stations, take an average of their times, and update your clock to the average

DX Spotting

DXSummit.fi

- Running in my shack 24/7
- Use your favorite DX Tracker too
